hat makes the best in HR really the best? Human resources is a complex, multifaceted field that requires professionals to have the ability to juggle priorities and excel at a number of tasks-from the sometimes tedious to the often strategic. It takes knowing what to hone in on and what to delegate, staying on top of the latest trends in compensation and always having a finger on the pulse of employee relations. And, often, with so many misconceptions about HR, it involves staying ahead of the curve through continuous education in an attempt to drive what the role will entail for the company. Being in HR requires having a number of talents and is not for the faint of heart. The role brings with it the potential to make a big impact on the lives of individuals working for the company-its most important assetsand, simultaneously, can leave managers feeling less than appreciated, when contributions to the bottom line are questioned. Perceptions of HR as a cost center and others, explained below, are just a few of the myths that often practitioners and companies from getting the most from this important role.

HR as a cost center

The view of HR as a cost center may be one of the instance, are a major part of noted that HR professionals hardest to overcome. Provide full ownership of manage Computers first appeared in schools over 12 years ago and today are used by 75 percent of Americans to access the Internet for three hours a day on average. Still, many in HR are reluctant to give up basic self-service benefit management tasks that would save a tremendous amount of time and allow them to better address company objectives.

While it is true that online benefits management can be a scary prospect for those who may be less computer savvy, having access to employee benefits online is another way to provide greater employee satisfaction through accessibility and choice. In fact, many employees will expect online access, especially today's younger generation for whom iPods and IM are part of everyday life. Self-service HR has become

invaluable that a essential core application" for Resource Management

## August 20 2010 - A recent study from ■ Do your homework - Research your leading North American recruitment firm Rosenzweig & Company highlights

how potential employees can best respond to increased use of recruiters as the economy recovers.

Jay Rosenzweig, managing partner

■It's been a long while since many people have been in these interviewing situations making it even more important than ever to have a firm grasp of the process well before the interview

The report offers key advice for indi-

- viduals recruited for a job opportunity: ■ The headhunter works for the employer, but can also be your friend - The report points out that recruiters can provide general advice and be used as a sounding board. The recruiter can act as an intermediary between candidates and potential employers, responding to comments or concerns before direct contact takes place.
- Retainer v. contingency Clarify the basis on which recruiters are being employed. Retainer-based contracts where payment is assured tend to be less focused on quick results and commission, reducing the risk of inappropriate placements.
- Sell yourself Convey your skills, experience and career plans without overstating your accomplishments. Provide recruiters with sufficient information to promote your candidacy to a potential employer.
- Be yourself Recruiters and potential employers can detect insincerity. Trying to redefine your background or personality in an attempt to fit a specific role is unlikely to be successful.

- prospective employers including recent financial and operational developments. However, do not present your-
- self as an expert on the organization. ■ Try to relax - Attempting to anticipate questions and preparing answers is likely to be counter-productive. Candidates may be unsuccessful if over-eagerness is interpreted as desperation.
- Be honest about any other opportunities you are considering - Both recruiters and potential employers will understand that you may be considering other options but will not appreciate being misled. ■ Come clean - Be honest with the
- recruiter about any past issues that could affect the attitude of a prospective employer. It is better to volunteer potentially negative information than risk it emerging at a later date.
- Accept constructive criticism If recruiters or potential employers provide constructive criticism, use it as a learning opportunity.

Jay Rosenzweig commented:

■Job seekers have had lean years and very little movement on the jobs front, including at the higher levels. Some people who've survived the recession with their job intact may think they hold all the cards if a company or recruiter calls. But now, more than ever, the best advice is to check your ego at the door and understand the 'buy and sell' process when presented with dream job opportunities. One of the most fundamental rules in this business is to know when to talk and know when to listen.'
